Open-Source Community , Web Development , Linux Distro

### SUMMARY/OBJECTIVE

As an IT industry enthusiast, from childhood to highschool with a hunch of an art there is not a better way to express myself than being a frontend developer. I started my journey in frontend with an internship in a fintech company which was a great opportunity to express and grow. After a couple of months I found myself in a position to learn about open-source projects and making contributions in the community. I think there isn't a best way to learn but there is always a better way , which is being present and putting yourself in action.

### WORK EXPERIENCE

#### Angular Developer

##### Nogara Solutions | Tehran, Iran | 2022 – Present

- Creating a solution for people to buy and sell Aban Capital Management's funds.
- Designing and implementing features like pwa, authentication, authorization and visual effects.
